Thank you, Libby. Cynthia left me a message asking me to get the information to Lee on the Upper Animas team. I'm not sure of Lee's last name, and don't have contact info. Can you help, please?

Thanks.

Warren

Hi Warren,

Was out on leave yesterday afternoon but did get the emails from both you and Jeanine. Rich Mylot took the lead. I'll let you know what was done on our part as soon as I catch up this morning.

Thanks! Libby

Good Afternoon: You likely know more about this than I do, but just in case, see the message string below.

FYI at the moment. I noticed that you were not copied on this. I think Mark Salley thinks you are out of the office.

Thanks Todd for the additional update.

I tried to reach Rich Mylott (for those who don't know, the PIO at EPA), left voice mail on his desk and cell phones suggesting that both DNR and CDPHE think EPA is the likely lead on this.

I've had no media calls on this.

Mark

Some points of clarification after consulting with Tony and, since they were not agreeing on all points, then Tony and Bruce together, including our involvement:

It is not a superfund site, but it is subject to a CERCLA removal action by EPA, so EPA jurisdiction.

We had it permitted in the 1980's, the permit was later forfeited and the AML program redirected surface flows and closed the portals.

As Bruce mentioned, Alan Sorenson was working as an adviser and technical consultant to EPA, primarily on the Red and Bonita, but also on the Gold King although he was not with the EPA contractors this morning.

Bruce and Tony agree that the pressure would have blown at some point no matter what.

EPA's response team was working on rehabilitating a portal at the Gold King Mine near Silverton this morning and a plug blew that discharged hundreds of thousands of gallons water contaminated with heavy metals and debris, the volume of which is approximately 20 to 30 feet deep, into Upper Cement Creek. The heavy metals include iron, zinc and copper. We estimate the water will hit the confluence with Las Animas in the next 10-15 minutes and flow through Silverton.
